REASONS FOR ALLOWANCE

The following is an examiner's statement of reasons for allowance: After a review of the prior art of record, it is believed that the present invention is novel and non-obvious wherein no reference discloses an apparatus for stopping a high pressurized fluid from escaping a rupture in a pipeline the apparatus comprising a support member having a first end, second end and an outer surface, an inflatable bladder sealingly engaging the first end and the second end of the support member, the inner inflatable bladder comprising a material substantially impermeable to fluid, an outer material layer substantially encasing the inner inflatable bladder formed of a woven fabric material capable of withstanding high inflation pressures of approximately 100 psi and an inflation hose for supplying pressurized fluid between the outer surface of the support member and the inner inflatable bladder, nor the method of sealing the rupture in a pipeline including the steps of providing an inflatable bladder into the a pipeline, positioning the bladder over the rupture and inflating the bladder to an inflation pressure of at least 100 psi such that the inflatable bladder engages the rupture when inflated. As pointed out by Applicant, the material taught by Boxmeyer would not be used by one of ordinary skill in the art to modify the inflatable apparatus of Lundman, as the device of Boxmeyer is utilized in constructing a rigid, erect, permanent structure that utilizes a resin matrix that is cured.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably
